OBJECTIVE

Software Engineer with 3+ years of professional experience across **full-stack development, backend/API engineering, and AI/ML application development**. Skilled in building and shipping production systems end to end — from relational data modeling and RESTful services to LLM-powered, agentic applications — with a strong foundation in object-oriented design, testing, and cross-functional collaboration.

EDUCATION

M.S., Computer Science, Western Michigan University, Kalamazoo, MI GPA: 3.9/4.0 | Expected Dec 2026

B.E., Computer Science, K.S. Institute of Technology, Bengaluru, India 2021

EXPERIENCE

Technology and Systems Intern, Room 35, Kalamazoo, MI | Oct 2025 – Apr 2026

- Owned end-to-end SDLC phases for an internal automation platform built in **Python**, from requirements gathering and design through implementation, testing, and production support, using AI coding agents to accelerate development.
- Built automated **Python**-based integrations between internal business systems using Docker containerization, and facilitated design discussions to guide development.
- Actively participated in resolving production issues and maintained detailed documentation to support the knowledge base for future projects.

Application Engineer, Alstom, Bengaluru, India | Sep 2022 – Jun 2024

- Designed and maintained **C#/.NET** backend services and **SQL Server/T-SQL**-backed applications, applying **object-oriented design** principles and full SDLC practices including code review and testing.
- Improved system responsiveness by **20%** and data retrieval efficiency by **30%**, actively participating in resolving production issues.
- Maintained detailed technical documentation of code changes, testing techniques, and support activities across development, test, and production environments.

Product Engineer, Wipro, Bengaluru, India | Aug 2021 – Sep 2022

- Built and integrated **RESTful APIs** and backend services for payment platforms processing **5,000+ daily transactions**, operating within Agile Scrum teams.
- Conducted code reviews and implemented test strategies to uphold software quality standards across the **full stack**, from the React.js UI to backend APIs and the database layer.
- Collaborated with cross-functional teams to integrate new features into existing applications while maintaining system stability.

SKILLS

Languages: Python, TypeScript, JavaScript, C#, Java, C, C++

Full-Stack: React.js, Node.js, HTML5, CSS, RESTful API Design & Integration

AI / LLM Development: Agentic & Multi-Agent Systems, LangChain, RAG, Structured Outputs, Prompt/Model Evaluation Pipelines

Backend & Frameworks: Python (FastAPI), C#/.NET, Microservices

Databases: PostgreSQL, SQL Server, T-SQL, MySQL, NoSQL

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, CI/CD, Git

PROJECTS

AI Workspace Framework — AI Production System

- Engineered a **Python**-based agentic AI framework with multi-agent orchestration, conversational memory, and MCP-style tool integration, applying **object-oriented design** throughout.
- Built automated evaluation pipelines to catch regressions and reduce hallucinations across prompt and model changes, moving quickly from prototype to a reliable, production-ready system.
- Technologies: Python, FastAPI, LangChain, OpenAI APIs, Pinecone, PGVector, Docker

Team Collaboration Platform

- Architected a full-stack web application with a **Spring Boot** backend, **REST APIs**, and a **relational PostgreSQL** database, containerized with Docker and deployed via CI/CD for reliable releases.
- Built responsive **React.js/TypeScript** interfaces with JWT-based auth, Redis-backed caching, and real-time notifications, supporting team workspaces, task tracking, and file sharing.
- Technologies: Java, Spring Boot, React.js, TypeScript, PostgreSQL, Redis, Docker, AWS, CI/CD, JWT
